

Guardian Telecom Introduces VoIP Products

Guardian Telecom has combined the benefits of VoIP with the outstanding quality of our telephony products. Now, a simple network connection is all that is required with Guardian Telecom's Voice over Internet Protocol (VoIP) industrial telephones. SIP connectivity expands Guardian VoIP reach into demanding and rugged environments. Guardian VoIP products are Power over Ethernet compliant (PoE) or can be powered using an optional external power supply.

Customers rely on Guardian products that meet their needs for reliability, durability and feature rich performance in extreme temperatures, weather, vandalism & vibration and provide enhanced levels of EMI & voltage surge protection. Now customers can have all that PLUS the advantages of VoIP in demanding, industrial telecom environments.

Guardian Industrial SIP Phones integrate seamlessly into your existing or new VoIP infrastructure. Users can remotely, monitor and program settings through a web browser to configure telephones on their network. LAN or WAN connection is direct via RJ45 connector.

Manufactured in our modern, ISO certified, CSA, UL and ATEX approved, state of the art facility, Guardian telephones meet the approved standards and requirements for the environments they are designed for.

The addition of Industrial VoIP to our extensive product line is the newest chapter in Guardian's ongoing commitment and investment in research & development, quality testing and bringing solid products to the marketplace.

Guardian Telecom products and systems are found in use around the world providing safe and reliable communications in all types of Industrial settings from mining to security, petrochemical to transportation, tunnels, shipping and all types of manufacturing plants.

Guardian Telecom VoIP Telephones

Outdoor Industrial VoIP Telephones

Used in both interior and exterior environments where the elements can be severe. Guardian Telecom Outdoor Industrial VoIP Telephones are designed to meet a variety of customer requirements under adverse conditions.

WTT-30 VoIP, WTT-40 VoIP, WTR-11 VoIP & WTR-41 VoIP — Water Tight VoIP Telephones & Water Tight Ringdown VoIP Telephones

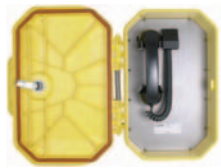

Guardian's Watertight WTT & WTR SIP Enabled VoIP Telephones offer maximum efficiency under extreme environmental conditions. The sturdy thermoplastic resin enclosure protects the internal circuitry against wind blown dust, rain, corrosion, splashing and high pressure water. With Type 4X & IP66 ratings these are ideal telephones for harsh conditions.

ACT-40 VoIP
— Metal Keypad & Armored Handset Cord

ACR-11 VoIP
— Ringdown Telephone
& Curly Handset Cord

ACR-41 VoIP
— Ringdown Telephone
& Armored Handset Cord

Industrial Telephones

Industrial VoIP Telephones are used in areas where hazardous rated versions are not required but the environmental conditions still demand an uncompromised and high level of ruggedness and reliability in communications equipment.

DTR-51 VoIP & DTR-61 VoIP — Industrial VoIP Ringdown Telephones

Safe, reliable communication in either indoor and outdoor industrial areas that are prone to harsh environments, where standard phones aren't suitable. Configurable for Desk or Wall Mount. Lift a DTR VoIP Ringdown Telephone handset and IP PBX programming routes the call to its assigned location. Highly durable weatherproof IP66 enclosure.

— Ringdown Telephone
& Curly Handset Cord

DTR-61 VoIP
— Telephone & Armored
Handset Cord

Emergency Telephones

Hands-free units that work in harsh conditions including extremely cold weather, rain and noisy environments. Designed for use in high ambient noise areas found in transit facilities and public locations including campuses and factories requiring a telephone critical to public safety or security.

HDE-11 VoIP, HDE-1100 VoIP, HDE-12 VoIP & HDE-1200 VoIP — Heavy Duty Emergency VoIP Telephones

Guardian's HDE VoIP Series phones are intended for use in public areas where direct assistance or hands-free communication is required. They provide a two-way link to assistance through full-duplex phone transmission. A call may be initiated from the phone or from the monitoring station. The phone may be programmed to autodial two numbers or to ring down through a PABX. These phones also provide the capability of monitoring the status of each unit from a remote location, informing personnel of a malfunction.
